

NATIONAL GREENPOWER ACCREDITATION PROGRAM

Quarterly Status Report, 1 April – 30 June, 2007

This report forms part of an ongoing commitment to provide stakeholders with information on GreenPower Products. The first section of this report provides general information on the National GreenPower Accreditation Program. This is followed by an overview of each GreenPower Product with information on sales, purchases and customer numbers.

The current Settlement Period is from 1 January 2007 to 31 December 2007. The dates of the Quarters are as follows:

- *Quarter 1:* 1 January to 31 March, 2007
- **Quarter 2: 1 April to 30 June, 2007**
- *Quarter 3:* 1 July to 30 September, 2007
- *Quarter 4:* 1 October to 31 December, 2007

This report, as well as additional information about GreenPower, is available on the GreenPower website:

www.greenpower.gov.au

Executive Summary

QUARTER IN REVIEW: 1 APRIL – 30 JUNE 2007

GreenPower Products totalled 32 for the Quarter, offered by 23 GreenPower providers. Availability and characteristics of the products, sales and total customers are described in this report. A summary of key data, collated across the GreenPower market is provided below.

Quarterly Status of National GreenPower Accreditation Program

	NSW	VIC	QLD	SA	WA	ACT	Total
Residential Customers	156,187	228,389	105,102	62,229	4,988	9,082	565,977
Commercial Customers	11,736	7,363	2,607	1,562	635	410	24,313
Total GreenPower Customers (net change this quarter)	167,923 (+38,173)	235,752 (+36,026)	107,709 (+7,880)	63,791 (+7,008)	5,623 (+957)	9,492 (+225)	590,290 (+90,269)
GreenPower Sales to Residential Customers (MWh)	41,457	43,640	29,849	12,076	5,019	6,194	138,231
GreenPower Sales to Commercial Customers (MWh)	59,302	48,279	10,841	11,618	4,699	13,173	147,912

GREENPOWER SALES

Quarterly and Year to Date (YTD) Commercial and Residential GreenPower Sales (MWh)

About the National GreenPower Accreditation Program

To support the growth of the renewable energy industry in Australia the NSW Government developed the *GreenPower Accreditation Program* in April 1997. The purpose of the program is to promote the installation of new GreenPower electricity generators by increasing consumer demand and confidence in accredited GreenPower products.

Due to its success, the program was expanded nationally through joint collaboration by participating state government agencies in New South Wales (NSW), Victoria (VIC), Queensland (QLD), South Australia (SA), Australian Capital Territory (ACT) and Western Australia (WA) and renamed the '*National GreenPower Accreditation Program*'. In May 2000, the National GreenPower Accreditation Steering Group was officially established. The NSW Department of Water and Energy (DWE) is currently appointed as the GreenPower Program Manager.

The term 'GreenPower Product' refers only to the GreenPower accredited portion of any product offered by a GreenPower provider. Most energy retailers throughout Australia offer at least one accredited GreenPower Product. In the contestable (deregulated) markets of NSW, VIC, SA, the ACT and QLD, all residential and commercial customers can choose to buy a GreenPower Product offered by any retailer licensed in that State. Larger customers in WA can also choose GreenPower from licensed retailers outside their franchise area.

GreenPower Products are now also offered by some companies that are not licensed energy retailers. In these cases, the GreenPower provider offers an accredited GreenPower product separate to a customer's electricity supply.

The three main types of GreenPower products offered are:

1. Consumption based products whereby customers nominate the level of GreenPower purchased according to a nominated percentage of their total electricity consumption;
2. 'Block' based products whereby customers purchase a kWh 'block' of GreenPower that is based on the average household electricity consumption and is not directly linked to an individual customer's consumption; and
3. Purchase of GreenPower to match consumption provided by another retailer. This is available nationally using web interfaces and direct sales to customers. While customers continue to purchase electricity from their standard electricity supplier, the GreenPower provider will purchase and surrender the equivalent number of GreenPower Rights and Renewable Energy Certificates (RECs) from eligible generation sources to meet the customer's elected electricity consumption.

Blended GreenPower products apply when a customer purchases a level of GreenPower equivalent to less than 100% of their electricity consumption. The 'backfill' or *non-accredited portion* of blended products is not reported on and can therefore be sourced from any type of electricity generation. The GreenPower accredited portion of a blended product must be equivalent to at least 10% of a customer's total electricity consumption.

RULES OF THE PROGRAM

The National GreenPower Accreditation Program sets stringent rules for all GreenPower providers offering an accredited GreenPower Product. Two key requirements are for GreenPower providers to: source all generation included in a GreenPower product from GreenPower approved sources; and purchase at least eighty per cent of GreenPower sales from 'new' renewable energy generation. 'New' is defined as any generator built or commissioned after 1 January 1997 that is GreenPower approved.

From 1 July 2006 onwards, GreenPower providers are required to source 100% of accredited GreenPower sales from 'new' GreenPower generation. For long term GreenPower sales contracts signed prior to 1 July 2006, the 100% 'new' GreenPower requirement must be implemented as contracts are renegotiated or by 31 December 2008, whichever is earlier.

Further information on the rules of the program is available in the *National GreenPower Accreditation Document*, available on the website at www.greenpower.gov.au

To ensure that GreenPower sales are additional to legislated renewable energy purchases through the Mandatory Renewable Energy Target (MRET), retailers are required to transfer eligible RECs for each MWh of generation classified as 'new' GreenPower generation sold as part of a GreenPower Product within a settlement period.

GREENPOWER GENERATORS

Under the National GreenPower Accreditation Program, a GreenPower approved generator is defined as an electricity generator that results in a greenhouse gas emission reduction and net environmental benefits; is based primarily on a renewable energy resource; and complies with the guidelines in the National GreenPower Program Accreditation Document. A description of the major generator types is provided in Appendix A.

There are currently 254 GreenPower approved generators in Australia, including 169 'new' generators, which have been commissioned or first sold energy since January 1 1997. For an interactive map of GreenPower approved generators, please visit the GreenPower website at www.greenpower.gov.au.

GREENPOWER GENERATORS ACCREDITED THIS QUARTER

The table below details the GreenPower generators approved in the quarter ending 30 June 2007.

Generator	Generation Type	Commissioning Date	Location
Paradise Dam Mini Hydro	Hydro	March, 2007	Coringa, QLD
Sun Retail Bulk Small PV	Solar	January, 2007	Various, QLD
Hopetoun Wind Turbine Upgrade	Wind	March, 2007	Hopetoun, WA

GREENPOWER PRODUCTS

GreenPower Products are available to electricity consumers in the commercial and residential markets. In some cases, different products are available to each market sector. The table below details the States in which GreenPower Products were offered during the Quarter.

ActewAGL GreenChoice

ActewAGL GreenChoice now offers a consumption in addition to its block based product to residential and event customers in the ACT and the Capital region. Residential customers are offered 10%, 25%, 50%, 100% and 200% GreenPower and event customers are offered 100% GreenPower.

Availability: The consumption based GreenPower product is available to all ACT and Capital region customers and the block based GreenPower product is available to all residential and business customers Australia-wide.

Residential Customer Options: Block based customers choose GreenChoice5, GreenChoice10, GreenChoice15 and now also GreenChoice 20. ActewAGL will then purchase 5, 10, 15 or 20 kWh of energy per day from GreenPower approved renewable sources for each GreenChoice residential customer. Consumption based customers choose 10%, 25%, 50%, 100% and 200% GreenPower.

Business Customer Options: Block based customers choose Business GreenChoice10. Business customers may elect to purchase multiples of 10 kWh per day. ActewAGL will then purchase the number of standard units nominated per day from GreenPower approved renewable sources. Event customers choose 100% GreenPower.

Quarter in Review: At the end of June 2007 there were 9,187 residential and 100 commercial GreenChoice customers. During the Quarter ending 30 June 2007 GreenChoice residential sales amounted to 6,122 MWh, commercial sales amounted to 5,669 MWh with total sales for the quarter 11,791 MWh.

'New' GreenPower purchases this Quarter: There were no GreenPower purchases this quarter.

Contact ActewAGL: On 13 14 93 or visit www.actewagl.com.au/greenchoice.

Energy One EcoOne

On Friday 22 June 2007, the National Electricity Market Management Company (NEMMCO) advised that it had issued a default and suspension notice to Energy One Pty Ltd under the National Electricity Rules.

The effect of the suspension notice is that Energy One Pty Ltd will be suspended from the National Electricity Market from midnight on 22 June 2007. The NSW Government's Retailer of Last Resort arrangements took effect from this time.

EcoOne offered a GreenPower accredited product to all residential and commercial customers in NSW. Customers were given the option to purchase either 10% or 100% of their total energy consumption as GreenPower. However, there were no GreenPower customers, sales or purchases reported.

Availability: EcoOne is no longer available.

Quarter in Review: At the end of June 2007 there were no residential or commercial EcoOne customers. During the Quarter ending 30 June 2007 there were no EcoOne residential sales or commercial sales.

'New' GreenPower purchases this Quarter: There were no GreenPower purchases this quarter.

Ergon Energy Queensland Clean Energy

Clean Energy from Ergon Energy Queensland Pty Ltd has a new structure (applicable to both new and existing customers from 1 January 2007) consisting of 50% (previously 30%) 'New' GreenPower with the backfill being sourced from renewable electricity from regional QLD sugar mills.

Availability: Franchise residential and business customers within Ergon Energy's franchise area.

Residential Customer Options: Choose the level of support, which ranges from \$10 per bill to \$120 per bill. For each contribution level, Ergon will purchase a set amount of energy from GreenPower approved sources on behalf of the customer.

Commercial Customer Options: Choose to allocate anywhere between 2.5% to 100% of electricity consumption to Clean Energy from Ergon Energy.

Quarter in Review: At the end of June 2007 there were 48,166 residential and 2,316 commercial Clean Energy customers. During the Quarter ending 30 June 2007 Clean Energy residential sales amounted to 7,518 MWh, commercial sales amounted to 3,009 MWh with total sales for the Quarter 10,527 MWh.

'New' GreenPower purchases this Quarter: Windy Hill Wind Farm, Koombaloo Hydro and Tully Sugar Mill.

GreenSwitch from Global Green Plan

GreenSwitch offers GreenPower using a web interface and also directly to commercial customers. While GreenSwitch customers continue to purchase electricity from their standard electricity supplier, GreenSwitch purchases and surrenders the equivalent number of GreenPower Rights and Renewable Energy Certificates (RECs) from eligible generation sources to meet the customer's electricity consumption. GreenSwitch customers can tailor their energy portfolio by selecting specific generators or purchasing the GreenSwitch default energy mix.

Availability: GreenSwitch is available to all residential and commercial customers throughout Australia.

Quarter in Review: At the end of June 2007 there were 204 residential and 41 commercial GreenSwitch customers. During the Quarter ending 30 June 2007 GreenSwitch residential sales amounted to 106 MWh, commercial sales amounted to 2,091 MWh with total sales for the Quarter 2,197 MWh.

Integral Energy /Ngreen

/Ngreen was launched during the quarter ending March 2006. /Ngreen customers select either /Ngreen Business, /Ngreen Home or /Ngreen Pure. /Ngreen Business customers can select a preferred level of Green Power ranging from 2.5% to 100%. /Ngreen Home is 10% accredited and /Ngreen Pure is 100% accredited. During the second quarter, /Ngreen Living was added to the /Ngreen GreenPower Product range and is a 10% GreenPower accredited consumption based product offered to small retail customers in NSW and QLD; and domestic customers in NSW and QLD with an annual consumption of less than 40MWh.

Availability: Residential and small retail business customers in NSW.

Customer Options: Business customers choose to have either 2.5%, 10%, 75% or 100% of electricity matched with renewable energy from GreenPower approved renewable sources. Residential customers choose either 10% or 100% GreenPower accredited product.

Quarter in Review: At the end of June 2007 there were 22,431 residential customers and 61 commercial /Ngreen customers. During the Quarter ending 30 June 2007 /Ngreen residential sales amounted to 4,482 MWh and commercial sales amounted to 75 MWh, with the total sales of 4,557 MWh.

Appendix A – Major Generator Types

SOLAR PHOTOVOLTAIC AND SOLAR THERMAL ELECTRIC SYSTEMS

Energy from the sun can be categorised in two ways, as heat energy (thermal energy) or as light energy.

Photovoltaics are a semiconductor-based technology which converts the sun's *light* energy directly into an electrical current. Photovoltaic panels are very versatile and can be mounted in a variety of sizes and applications such as on building roofs, roadside emergency phones or in solar powered calculators.

Solar thermal systems use the sun's heat to generate electricity, usually by heating a fluid such as water and using it to drive a turbine. Such systems are not common in Australia.

WIND TURBINES AND WIND FARMS

Wind turbines can be used to drive a generator to create electricity. Modern wind turbines for generating electricity usually have two or three blades (up to 45m in length) and often involve dual land use, as sheep and cattle can graze around the base of the turbines. A single wind turbine may be sufficient to power up to 500 homes. Commercial wind farms group these turbines together in one location to produce larger amounts of electricity.

HYDRO-ELECTRIC POWER STATIONS

Hydro-electric power is electricity produced from the energy of falling water using dams, turbines and generators. The environmental impact of hydro-electric projects varies and only those that can be shown to be environmentally acceptable can be classified as 'green'.

BIOMASS-FIRED GENERATORS

Methane generated by the decomposition of biomass resources (putrescible and green waste) in landfill sites, sewage treatment works or large scale composting can be used to generate electricity. Waste materials from agricultural enterprises such as forestry, sugar cane, winery and cotton production can also be used to generate electricity.

Such projects are considered generally suitable as GreenPower projects, but are carefully assessed by the Project Manager on a case by case basis.

A wide variety of crops could be grown specifically for energy generation including timbers, oils or complex sugars. The suitability of these crops will depend on the sustainability of the agricultural practices used. The "energy crops" industry is in its infancy in Australia.

With regard to forestry wastes, utilisation of fuels from existing forestry plantations is likely to be generally acceptable under GreenPower. However, utilisation of any materials (including wastes) from high conservation value forests such as old growth forests is not acceptable.

ENDNOTES

A 'new' GreenPower generator is defined as an electricity generator or increase in generator capacity, which was commissioned or first sold energy (whichever is earlier) after January 1, 1997 or after launch of the GreenPower Product (whichever is earlier)

An 'existing' GreenPower generator is defined as an electricity generator or increase in generator capacity which was commissioned or first sold energy (whichever is earlier) prior to January 1, 1997.
