Choose GreenPower: Case study

Unipod Pty Ltd

Unipod is a manufacturer of polystyrene 'waffle pods' – which is a way of building concrete slabs in the building industry. The company is based in Derrimut, employing around 22 people across a wide range of roles.

Despite being a small business, Unipod was spending an average of \$14,000 per month on energy. By switching to a new energy plan, including 10% GreenPower with AGL Energy, Unipod is projected to reduce its monthly bill to approximately \$11,900 and save a huge \$21,000 annually.

General Manager, Peter Sheehan, said he is proud of the environmentally-friendly measures that Unipod already has in place, but wanted to go a step further by switching the business to GreenPower.

"Unipod recycles polystyrene, uses energy efficient lighting and the most energy efficient machines and equipment; however we were keen to be recognised as an environmentally-conscious company in as many ways as possible, so switching to GreenPower was an easy next step. The Choose GreenPower website helped us with our research."

He added: "The only thing we had to do was provide a copy of our recent energy bills and within a few business days we received a great cost comparison of energy quotes which included GreenPower. The process was very simple and transparent; I would rate the free cost-comparison service almost 10/10."

Peter believes that using GreenPower is a great way to give something back to the environment and reduce Unipod's carbon footprint. He continued: "Being a responsible business, we believe that the benefit of doing something should not be always focused towards us. However using GreenPower will help identify our company as "GreenPower accredited" and with the use of the GreenPower logo, we can proudly say we are 'green' to our customers and business partners - we are hoping a few of them will follow us soon."
